Continuation of 13. Other: Applicants argue that the structure of the instant application is different from the structure taught by Hulin. The Examiner respectfully submits that the structure described by figure A is only a narrow interpretation of claim 1. Claim 1 does not claim that resin powder is not coated on the base particle. Claim 1 recites that a powder composition comprising one resin powder. In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., resin powder is not coated on the base particle) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See In re Van Geuns, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993). Hulin teaches that a composition comprising of base particle, which can be aluminum powder, which typivally have a flake shape, and carrier preaging component coated thereon. The carrier preaging component comprises of resin and charge control agent.

Applicants argue the charge control value relationship is different from the instant application and the teachings of the Hulin, Hou, Yoshiki and Shizuo references. The Examiner respectfully submits that since the charge value relationship is determined by the constituents of the composition, the claimed charge value relationship would be inherent to that of combined teaching of Hulin. See MPEP 2112. Furthermore, counsel's argument can not take the place of the evidence

Applicants argue that after the printing process, only the carrier preaging component is left on the print matter. The Examiner respectfully submits that claim 8 only recites applying the coating composition to a substrate to obtain a coating. It does not recite all the components of the coating composition in the coating after the applying process.

Applicants argue that the rejection of claim 15 under 35 U.S. C. 112 second paragraph should be withdrawn in light of the specification, particularly tables 1 and 2. The Examiner respectfully submits that table 1 and 2 contain just numerical data. They do not provide which number is considered high or effective or excellent by one of ordinary skill in the art.
